

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

THE CONTINUUM

and Other Types of Serial Order

with an Introduction to Cantor's Transfinite Numbers

By
EDWARD V. HUNTINGTON

Published by
HARVARD UNIVERSITY PRESS
Cambridge, Mass.
1917

Price - \$1.25

From the Bulletin of the American Mathematical Society:

"A remarkably beautiful and satisfying exposition of one of the highly fascinating subjects of modern mathematics. Anyone, whether or not he has been interested in the theory of the continuum and related matters, will find awaiting him here a purely intellectual delight of unusual order. It would be hard to seek out anywhere a more satisfying account of a topic in mathematics."

From the American Mathematical Monthly:

"In introducing beginners to the simple postulational science of a system with order relation, Huntington at once chooses the best means of exemplifying general ideas, and provides an explanation, intelligible to all, of the delicate and difficult real number concept. Ample material is provided to serve as a foundation for further profitable reading, and excellent indications are given to guide the student in such reading. The book is professedly and undeniably available for use in non-mathematical circles without suffering in scientific tone. Simplicity and attractiveness are somehow made compatible with painstaking attention to details of argumentation. The treatment of continuously ordered series, with the emphasis placed on such types as possess an n -dimensional framework, is noteworthy."

From the Journal of Philosophy, Psychology, and Scientific Methods:

"The chief text and reference book of those American students who desire an acquaintance with the important subject of the theory of aggregates. Probably the handiest and most up-to-date brief treatment of the subject in existence."

Mathematical Philosophy

A STUDY
OF FATE AND
FREEDOM

Lectures for Educated Laymen

By **CASSIUS J. KEYSER, Ph.D., LL.D.,**

*Adrain Professor of Mathematics
in Columbia University*

GINO LORIA, Professor of Mathematics in the University of Genoa, and Editor of *Il Bollettino di Matematica*, in a review written for the *Bulletin des Sciences Mathématiques*, says:

"L'étude du beau volume du professeur américain finie, il me vint à l'esprit cette pensée que si quelque mathématicien connaissant au fond l'anglais voulait le traduire en français, en cette langue de haute perfection, capable d'exprimer toutes les nuances de la pensée, de se plier à toutes les tournures d'esprit, il rendrait, un service signalé non seulement à la science en général, mais aussi à la civilisation; car l'Ouvrage que nous venons d'analyser rapidement est de ceux qui ont le privilège d'élever notre âme au-dessus des basses considérations de nature matérielle dont on est aujourd'hui affligés par les déplorables conditions où la grand guerre a plongé l'humanité entière."

"Upon completing the study of this beautiful work of the American professor the thought occurred to me that if some mathematician having a thorough knowledge of English were to translate the book into French, that highly perfect language, capable of expressing all the shades of thought, of meeting all the demands of the mind, he would render a signal service not only to science in general but also to civilization; for the work we have briefly analysed is among those which have the prerogative to elevate our souls above the gross material considerations which weigh us down in consequence of the deplorable conditions into which the great war has plunged all humanity."

\$4.70, postage extra.

Important Notice

The Mathematical Association of America, like all other organizations of an educational character, gives manifold more than it receives from its constituents. This discrepancy is accounted for by the gratuitous and arduous work given to the Association by its devoted servants.

Since it is impossible to raise the dues above a certain maximum without going beyond the reach of very many of those to whom the Association means most, it seems clear that an endowment fund is the best solution of the difficulty. Now that the Association is incorporated it is legally qualified to administer such a fund.

An endowment is needed not only to prevent a reduction of the number of pages in the MONTHLY, but also to enable the Association to make just compensation to its servants, and to go forward with its important projects such, for example, as the preparation and publication of a Mathematical Dictionary which is so greatly needed in the English language.

It is believed that, when these conditions are widely known among the friends of mathematics, financial support of this kind will be forthcoming.

Legal Form for Gifts and Bequests

I hereby give¹ to the Board of Trustees of the Mathematical Association of America the sum of Dollars,

to be known as the.....

.....Fund, and to be used

for { Endowment—the income only of which may be expended.
Special Projects—for which both principal and income may be expended.

Witness:

Signature.....

¹In case of a bequest, the first line should read "I hereby give and bequeath," etc.

²Indicate which one of the two purposes is desired, and omit the other.

CONTENTS

Rates of Exchange. By Professor H. E. BRAY.....	365
A Simple Theory of Competition. By Professor G. C. EVANS.....	371
On Kellogg's Diophantine Problem. By Professor D. R. CURTISS.....	380
A Model for the Peano Surface. By Professor A. EMCH.....	388
The First Attempt at a Table of Integrals. By Professor N. R. BRYAN...	392
Among my Autographs: 29. Legendre and Cauchy Sponsor Abel. By Professor D. E. SMITH.....	394
QUESTIONS AND DISCUSSIONS: Discussions—"Uncle Zadock's Rule for ob- taining the Dominical letter for any year" by Dr. W. H. VAIL; "Con- struction of the regular undecagon by a sextic curve" by Professor C. B. HALDEMAN; Remarks by the Editor; "A generalization of the Pythagorean theorem" by Professor J. ROSENBAUM; "Note on trigo- nometric functions" by Professor E. SWIFT; "Slope of a curve in polar coördinates at the poles" by Professor H. J. ETTLINGER.....

NOTES AND NEWS	425

EDITORIAL CORRESPONDENCE AND BOOKS FOR REVIEW should be addressed to the
EDITOR-IN-CHIEF for 1923, W. B. FORD, 204 Mason Hall, Ann Arbor, Mich.

BUSINESS CORRESPONDENCE should be addressed to the SECRETARY-TREASURER of the
Association, W. D. CAIRNS, Oberlin, Ohio.

Eighth Summer Meeting of the Association, Vassar College, September 5-6, 1922

Seventh Annual Meeting, Harvard University, December 28, 29, 1922

The following are dates of Section meetings of the Association in 1922 (unless otherwise
specified):

ILLINOIS, Rockford, Ill., April 23-29
IOWA, Des Moines, November 3; Cornell
College, Mount Vernon, April 27-28, 1923
KANSAS, Topeka, January 21; January 20,
1923
KENTUCKY, Georgetown College, April 8;
University of Kentucky, April, 1923
MARYLAND-VIRGINIA-DISTRICT OF COLUMBIA,
Washington, December 9; Baltimore,
May, 1923
MINNESOTA, St. Paul, June 4, 1921; St.
Paul, May 27

MISSOURI, Kansas City Junior College, No-
vember 18; University of Missouri, Col-
umbia, November 30-December 1, 1923
OHIO, Columbus, Apr. 14-15; Mar. 30-31, 1923
ROCKY MOUNTAIN, Greeley, Colo., April 14-
15; University of Colorado, April, 1923
SOUTHEASTERN, Atlanta, Ga., April 29; Agnes
Scott College, Decatur, Ga., March 10,
1923
TEXAS, Dallas, November 25, 1921; Houston,
December 1-2

Volumes and Sets of the Monthly

Complete sets of the Monthly (1894-1921) are obtainable only occasionally through
dealers in periodicals, but many single numbers and complete volumes (1894-1912) may
be had through the Secretary at varying prices, according to scarcity of stock.

Volumes for 1913, 1914 and 1915 will be sold, when available, *only to members of the
Association who can thereby make up complete sets*—price, \$5.50.

Most of the volumes for 1916-1921 can be obtained through the Secretary at \$5.00, but
scarcity of a few issues here also will raise the price of certain volumes to \$6.00.

Address all communications to the Secretary,

W. D. CAIRNS

Oberlin, Ohio

THE NEW ERA PRINTING COMPANY

LANCASTER, PA.

Is prepared to execute in first-class and satisfactory manner all kinds of printing and electrotyping. Particular attention given to the work of Schools, Colleges Universities, and Public Institutions.

Books, Periodicals

Technical and Scientific Publications

Monographs, Theses, Catalogues

Announcements, Reports, etc.

All Kinds of Commercial Work

*(Printers of the Bulletin and Transactions of the
American Mathematical Society, etc., etc.)*

Publishers will find our product ranking with the best in workmanship and material, at satisfactory prices. Our Imprint may be found on a number of high-class Technical and Scientific Books and Periodicals. Correspondence solicited. Estimates furnished.

THE NEW ERA PRINTING COMPANY

WILEY BOOKS

DICKSON'S

First Course in the Theory of Equations

By **LEONARD EUGENE DICKSON, Ph.D.**, Professor of Mathematics in the University of Chicago.

This new book differs essentially from the author's "Elementary Theory of Equations," both as to omissions and additions, and, since it is addressed to younger students, it may be used parallel with a course in differential calculus. Over 500 exercises are included, distributed into 70 sets. As a whole, the text gives that knowledge of the theory of equations which is a necessity in the subsequent mathematical courses.

168 pages. 6 by 9. 26 figures. Cloth, \$1.75

LIPKA'S

Graphical and Mechanical Computation

By **JOSEPH LIPKA, Ph.D.**, Assistant Professor of Mathematics in the Massachusetts Institute of Technology.

"The author of this volume has produced a treatise that is admirable not only for its clarity of diction and logical sequence of ideas, but also because it sets before the general scientist and the engineer principles and processes of the greatest practical utility, which heretofore have not been easily accessible in their entirety." Robert C. Strachan, in *Engineering News-Record*.

264 pages. 6 by 9. 205 figures. Cloth, \$4.00

PHILLIPS'

Differential Equations

By **HENRY B. PHILLIPS, Ph.D.**, Associate Professor of Mathematics in the Massachusetts Institute of Technology.

This text combines a thorough drill in the solution of problems in which the student sets up and integrates his own differential equation. For this purpose certain topics in mechanics and physics needed in groups of problems are briefly presented in the text.

78 pages. 5 by 7 $\frac{1}{4}$. Illustrated. Cloth, \$1.25

Write for copies of these books on Free Examination.
